U.S. Patent and Trademark Office PTOL-326 (Rev. 1-04)

Art Unit: 2134

### **DETAILED ACTION**

### Response to Arguments

1. Previous arguments have been considered, but are moot in view of new grounds of rejection.

## Claim Objections

2. Claim 1 is objected to because of the following informalities:

Claim 1 lines 8 and 9, repeat lines 6-7. The Examiner believes lines 8 and 9 should read "storing said corresponding base layer with said unique connection identifier therein within said checkpoint server".

Appropriate correction is required.

Claims 1, and 9, the last 4 lines, are very confusing to interpret. The examiner believes a better interpretation of the claim might be "wherein checkpointing is a process of storing critical data regarding the state of the connection though the router, wherein the connection is re-established using the checkpointed data.

Application/Control Number: 09/515,809

Art Unit: 2134

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form

Page 3

the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on

sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Housel

III US 5,907,678.

As per claims 1 and 9,

Housel III teaches a communication system having a checkpointing server, (Col 14 lines

15-33). Housel III teaches having unique identifiers, (Col 16 lines 35-39). Housel III

teaches determining whether there has been a change of state for an existing connection,

(Col 14 lines 15-22). Housel teaches checkpointing data with said unique identifier and

using checkpointed data to re-establish connection in said communication system, (Col

14 lines 20-33). Housel teaches that a router is part of the communications network, (Col

1 line 35).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

Application/Control Number: 09/515,809

Art Unit: 2134

Claims 3, 5-8, 11, 13, and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Housel III US 5,907,678 in view of Friedman US 6,151,679

As per claims 5, 6, 7, and 13, Housel III teaches a communication system having a checkpointing server, (Col 14 lines 15-33). Housel III teaches having unique identifiers, (Col 16 lines 35-39). Housel III teaches determining whether there has been a change of state for an existing connection, (Col 14 lines 15-22). Housel teaches checkpointing data with said unique identifier and using checkpointed data to re-establish connection in said communication system, (Col 14 lines 20-33). Housel teaches that a router is part of the communications network, (Col 1 line 35).

Housel does not teach firewalls. Housel III does not teach encoding said checkpoint data. Friedman teaches the use of routers as firewalls in a communications system, (Col 4 lines 8-13). Friedman teaches encrypting data through the router, (Col 4 lines 13-16).

It would have been obvious to one of ordinary skill in the art to encrypt the checkpointed data so that it was protected from tampering, thus enhancing system security.

As per claims 3, 6, 8, 11, and 14, Housel teaches recovering checkpointed data to reestablish a connection, (Col 14, lines 20-33). Housel teaches use of a router in communications, (Col 1 line 35). Housel does not teach firewalls.

Application/Control Number: 09/515,809

Art Unit: 2134

Friedman teaches the use of routers as firewalls in a communications system, (Col 4 lines 8-13).

It would have been obvious to one of ordinary skill in the art to use the firewall router of Friedman in the checkpoint system of Housel to protect clients from hackers and viruses.

#### Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher J Brown whose telephone number is (571)272-3833. The examiner can normally be reached on 8:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gregory Morse can be reached on (571)272-3838. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you

Center (EBC) at 866-217-9197 (toll-free).
